

# PHARMA 1 HUMANITAS INFANT MILK POWDER

*Ingredients: Maltodextrin, the amino acids taurine ascorbic acid, powdered evening primrose oil, potassium iodide, and skimmed milk powder.*

*How to apply: Prior to starting, wash your hands and sterilize the bottle, teat, and ferrule. Bring the necessary amount of water to a boil and transfer it, still at 70°C, into the bottle. After filling, use a well-washed kitchen knife to scrape off any excess powder to create a measuring cup that is level. As directed by the typical feeding chart, add the level scoops of powder. To dissolve the powder, shake the bottle after closing it. The milk should be about 40°C when you place the bottle under running water to cool it down.*

**FROM 0 TO 6 MONTH**
