Pack of 2 Syringes Pre-filled Vials 1 MI
Hyaluronic acid filler with volumizing action

Description

Elasty Deep is an injectable filler based on cross-linked hyaluronic acid designed for tissue augmentation.

Contains hyaluronic acid re-linked with BDDE in accordance with the guidelines.

A filler based on hyaluronic acid specific for the volume of facial tissues, with a PNET TECHNOLOGY (preserved Natural Entanglement Technology), which preserves the natural structure of hyaluronic acid as the bonds of the linear structures of HA with BDDE are minimal.

A filler based on hyaluronic acid specific for the volume of facial tissues, to smooth wrinkles and folds.

How does it work?

Elasty D is indicated for marionette wrinkles/nasogeniene, lip volume, neck wrinkles, nose correction cheeks (rhinofiller), slight increase in cheekbones

For which areas?

Ideal for treating lips, furrows, cheeks, cheekbones, nose

When and how long does it last?

The treatment can be carried out at any time of the year. The effects and duration vary from person to person and are prolonged over time (over 6/8 months).

Cosmetic Dosage

The application of the product is reserved exclusively for medical personnel.

Composition

1 ml contains 24 mg of HA cross-linking sodium

Format

2 Syringes Pre-filled Vials 1 MI

contiene
2
siringhe in vetro
preimpilate

<p>Pack of 1 pre-filled syringe of 4 ml Hyaluronic acid for infiltration</p> <p>Description Cingal is a whitish, opaque, sterile, single-use suspension of a cross-linked hyaluronic acid (HA) gel with added corticosteroid (triamcinolone hexacetonide). HA is an essential component of the extracellular matrix and is found in high concentrations in synovial fluid of the joints. Hyaluronic acid is biocompatible by nature and its degradation process follows a normal physiological path. HA is responsible for the viscoelastic properties of synovial fluid. The synovial fluid of joints affected by osteoarthritis has a lower concentration of HA and a reduced molecular weight of HA compared to that of healthy joints. Sodium hyaluronate supplements (viscosupplements) have been shown to be well tolerated in synovial joints affected by osteoarthritis and work to reduce pain and improve function through lubrication and mechanical support. The added corticosteroid triamcinolone hexacetonide has an anti-inflammatory action to provide short-term pain relief when used in an intra-articular injection of a joint affected by osteoarthritis. Cingal is indicated as a viscoelastic supplement or as a substitute for synovial fluid in human joints. Cingal is suitable for quickly and long-term relief of the symptoms of joint diseases such as osteoarthritis. Cingal works long-term by relieving symptoms through lubrication and mechanical support, also providing short-term pain relief thanks to triamcinolone hexacetonide.</p> <p>Cosmetic Dosage The application of the product is reserved exclusively for medical personnel.</p> <p>Format 1 pre-filled syringe of 4 ml</p>	 		<p>EX-WORKS ITALY BUYER SHOULD PAY SHIPPING MINIMUM ORDER (MOQ): ONE PRODUCT SHIPPING WILL PAY BUYER IN ANNEX AFTER WE KNOW THE ADDRESS OF BUYER</p>

Pack of 1 pre-filled syringe of 1 ml
Innovative formula with lidocaine

Description

Madek Laboratoires, always in cooperation with the Swiss experience and precision of Xcelens international, has developed an exclusive formula combining the purest hyaluronic acid in the world with lidocaine, creating the new range of "Jalor Sweet" files. These new products are formulated with the usual ideal concentration of 23mg/ml of cross-linked hyaluronic acid with the lowest certified level of BDDE on the market and with a percentage of lidocaine at 0.3%. The hyaluronic acid used is as always of synthetic origin and therefore totally free from animal proteins while lidocaine is a local anesthetic whose objective is to reduce the pain associated with injections and therefore increase comfort for patients, being released quickly in the filler implant.

New J4HA architecture

The new JALOR Sweet Touch and Sweet Kiss are proposed with the highly advanced J4HA cross linking technology by means of which, the sophisticated structure of chains with different lengths of cross-linked hyaluronic acid, based on a higher viscodynamicity of the molecules, allows us a greater plasticity of the gel, thus creating a product that is easier to handle in the system and with greater yield and durability in the tissues.

For which areas?

Ideal for combating skin aging and also for increasing the volume of the lips, reshaping their contours.

When and how long does it last?

The treatment can be carried out at any time of the year. The effects and duration vary from person to person.

Cosmetic Dosage

The application of the product is reserved exclusively for medical personnel.

PRODUCT	PROOF OF PRODUCT		INCOTERMS
<p>Skinfill Plus Diamond is a volumizing, reabsorbable, biocompatible, biodegradable, sterile, highly purified, safe filler. With CE mark. A hyaluronic acid ideal for the treatment of deep wrinkles and to increase the volume of the lips, for deep nasolabial and glabellar folds. Also recommended for the treatment of large areas, it defines the volume and corrects hypo-volumetry. This product is intended to be administered by a physician by injection into the dermis only.</p> <p>For which areas? Filling deep wrinkles. Volumizing lips, nasolabial and glabellar folds.</p> <p>When? How long does it last? The treatment can be carried out at any time of the year. The duration of a filler depends on a series of factors, such as quantity injected, depth of wrinkles, physical characteristics of the injection area, injection technique, extent of correction required, age, skin, and lifestyle of the patient. The effects of SkinFill are prolonged for up to 9-10 months.</p> <p>Cosmetic Dosage The application of the product is reserved exclusively for medical personnel.</p> <p>Composition Cross-linked sodium hyaluronate concentration: 24 mg/ml Cross-linking rate: medium Phosphate Buffer PH 7.0 Q.S. : 0.8</p> <p>Format 2 pre-filled syringes of 1 ml + 4 needles</p>			<p>EX-WORKS ITALY BUYER SHOULD PAY SHIPPING MINIMUM ORDER (MOQ): ONE PRODUCT SHIPPING WILL PAY BUYER IN ANNEX AFTER WE KNOW THE ADDRESS OF BUYER</p>

dihydrate, dibasic sodium phosphate
dodecahydrate, water p.p.i.
One syringe contains 2.0 ml of non-pyrogenic
gel, sterilized with moist heat.

Format
1 x 2ml

Injectable filler

IN STOCK NOW

The application of the product is reserved exclusively for medical personnel.

Format
 1 pre-filled syringe (50.0 mg of hyaluronic acid sodium salt in 2.5 ml of sodium chloride buffered saline solution) and 1 needle 21 G x 1 1/2" (0.8 x 40 mm).
 Vial-syringe sterilized by moist heat.
 Needle sterilized with ethylene oxide.
 Aug: CE 0197

Doublyx Evo Pre-filled Syringe
 Packaging 1 x 2 ml
 Hyaluronic acid with biorevitalizing action and nourishing action

Description
 Doublyx Evo Intradermal Gel Pre-filled Syringe is a medical device in sterile gel based on medium molecular weight hyaluronic acid (1.0-1.5 x 106 Dalton). It is indicated in the biorevitalizing treatment of the face, neck and décolleté as it nourishes the deeper layers of the epidermis and combats skin aging. Doublyx Evo Intradermal Gel Pre-filled Syringe gives elasticity, softness, firmness and firmness to the skin.

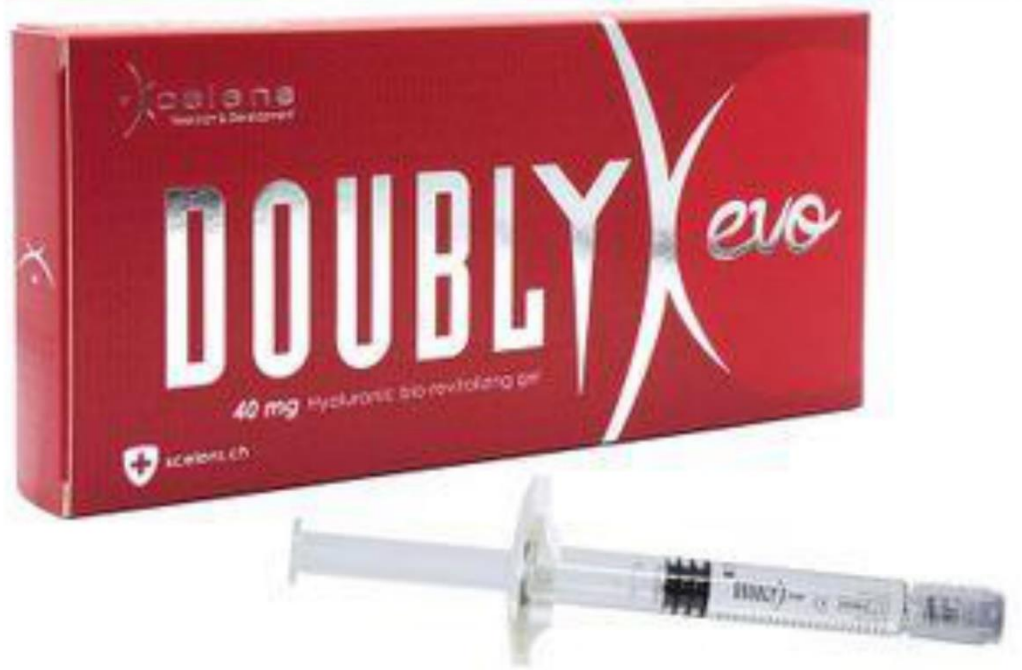

How does it work?
 Doublyx Evo Pre-filled Syringe hydrates the deeper layers of the skin by stimulating the formation of collagen naturally produced by the body for skin with regained elasticity.

For which areas?
 Ideal for treating the face, neck and décolleté.

When and how long does it last?
 The treatment can be carried out at any time of the year. The effects and duration vary from person to person.

Cosmetic Dosage
 The application of the product is reserved exclusively for medical personnel.

Composition
 20 mg/ml sodium hyaluronate, sodium chloride, monobasic sodium phosphate

<p>Sinovial - One 2.0% Pack of 1 Pre-filled Syringe of 2.5 ml (CE Medical Device) Sinovial One 2.0% Pack of 1 pre-filled syringe of 2.5 ml Infiltrative hyaluronic acid</p> <p>Description Sinovial One 2.0% is made up of a buffered physiological solution of hyaluronic acid sodium salt with viscoelastic properties. Sinovial One contains 2.0% highly purified hyaluronic acid sodium salt with a molecular weight between 800 and 1,200 kDalton. The other components of the product are: sodium chloride, sodium phosphate and water for injections. Hyaluronic acid sodium salt (hyaluronan*) is made up of repeated chains of disaccharide units of N-acetylglucosamine and sodium glucuronate. It represents a fundamental component of the synovial fluid, to which it gives particular viscoelastic properties. The hyaluronic acid sodium salt of Sinovial One 2.0% is obtained by fermentation and has not undergone chemical modification processes. Sinovial One 2.0% comes in the form of a 3 ml glass syringe containing 2.5 ml of solution. The contents of the syringe are sterile and non-pyrogenic. *Alternative names are often used.</p> <p>Cosmetic Dosage</p>			<p>EX-WORKS ITALY BUYER SHOULD PAY SHIPPING MINIMUM ORDER (MOQ): ONE PRODUCT SHIPPING WILL PAY BUYER IN ANNEX AFTER WE KNOW THE ADDRESS OF BUYER</p>  <p>IN STOCK NOW</p>

Hyaluronic acid, also called hyaluronan, is a glycosaminoglycan found in the extracellular matrix of many tissues, including the skin, cartilage, and vitreous humor. It is a large, negatively charged molecule that binds water and provides structural support. Hyaluronic acid is also found in the synovial fluid of joints, where it acts as a lubricant and shock absorber. In the skin, it helps maintain moisture and elasticity. Hyaluronic acid is used in various medical and cosmetic applications, including joint injections, dermal fillers, and wound healing.

BOTOX PHARMA 1

HUMANITAS

PHARMA 1 HUMANITAS

PHARMA 1 HUMANITAS

DEVICE

Mask with light input that stimulates the formation of collagen.

- Allows irradiation on the face by stimulating collagen growth factors.
- Allows for higher effects than those found with other methodologies.
- Allows to subject the face to a stimulating effect of collagen.
- Improves elastic fibers and skin firming.

A SERVICE WHAT

It is a light emitting device with an infrared heat component that stimulates the formation of collagen.

AS IN OPERATION

It is a device consisting of a control console and a mask which, through the use of infrared lamps with partial heat generation, stimulates the production of collagen on the face, together with a patch imbued with growth factors and peptides

PHARMA 1 HUMANITAS

Non-invasive generator of impulsive currents for the superficial and selective transport of cosmetic active ingredients for the face and body.

- Improves the effectiveness of an aesthetic treatment.

- Promotes the delivery of greater quantities of active ingredients than other methods.

- Shortness of treatment, which translates into a reduction in the number of sessions.

- Absence of side effects.

PHARMA 1 HUMANITAS

HEALTH - BEAUTY - HI-

WHAT IT'S FOR

It serves to facilitate the delivery of active ingredients and increase their effectiveness. It is based on the application of an electrical impulse on the skin which, after applying a serum or lotion, facilitates its penetration.

HOW DOES IT WORK

The applied current generates a controlled phenomenon of permeabilization of the stratum corneum. A local diffusion zone is created on the surface layer through which molecules of active ingredients are conveyed.

TECHNICAL FEATURES

Power supply: 100-240 Vac Frequency: 50/60 Hz.

Power: 2VA-37mA

Output a1K : 4.7 Ma-4.66 Vrms Dimensions with packaging: 19x19x5.3 cm

Appliance dimensions: 13x4.5 cm Weight: 0.3 kg.

Pressotherapy PHARMA ONE equipment consisting of a digital control unit with LCD display and a costume consisting of leggings, abdominal band and arm sleeves.

- Stimulates both lymphatic and venous return circulation.
- Promotes the reabsorption of interstitial fluid in combination with bandages.
- Improves drainage by acting on lymphatic vessels and ganglia in combination with bandages.
- Analgesic and relaxing effect thanks to the reabsorption of edema.

WHAT IT'S FOR

The pressure massage is an alternative to manual lymphatic drainage. It is based on pressure exerted on the legs, abdomen and arms with the aim of activating the venous blood return, thus favoring the reabsorption of edema and interstitial fluid.

HOW DOES IT WORK

It is a compression system managed by the control unit, which has the function of infusing air into the parts of the costume where the areas of the body to be treated are inserted (legs, abdomen, arms).

TECHNICAL FEATURES

Power supply: 220/240 V. Frequency: 50/60 Hz. Pressure: 195-240 mmHg

Pressure: 0.26-0.32 bar Max working time: 60 minutes Power: 75 W Dimensions with packaging: 61x45x15.5 cm Appliance dimensions: 41x24x13 cm Weight: 14 kg.

HEALTH - BEAUTY - HI-TECH

AESTHETIC MESOTHERAPY

Programmable impulse current generator that allows face and body electroporation treatments with an absolutely bloodless methodology.

- Allows the delivery of active ingredients directly into the area to be treated.
- It allows to achieve higher effects than those obtained with other methodologies, la without causing any damage.
- It is absolutely painless.
- Allows ions to bind to certain plasma proteins, resulting in an increase in residence time.
- Improves the trophism of superficial tissues.

WHAT IT'S FOR

It is one of the most important technological systems in the aesthetic sector, non- invasive, without risks and side effects. The use of non-invasive mesotherapy increases the transport of molecules of active ingredients through the skin, exponentially amplifying the effects and results of the treatments.

HOW DOES IT WORK

It consists in the application of short special pulses that act on the intercellular spaces causing molecular changes, which lead to the formation of ultramicropores that temporarily increase skin permeability.

During this skin permeability, Mesotech selectively transports cocktails of dedicated active ingredients directly to the face and / or body areas to be treated.

TECHNICAL FEATURES

Power supply: 220/240 V Frequency: 50/60 Hz.

Handpiece current when empty: 28 Vpp

Ha-Pnd- piece current 1K 1: 18.5 Vpp Handpiece current 500 : 13.5 Vpp Dimensions with packaging: 37x37x110 cm Equipment dimensions: 32x32x105 cm Weight: 13 kg.

Pressotherapy PHARMA ONE equipment consisting of a digital control unit with LCD display and a costume consisting of leggings, abdominal band and arm sleeves.

- Stimulates both lymphatic and venous return circulation.

TECHNICAL FEATURES

Power supply: 220/240 V. Frequency: 50/60 Hz. Pressure: 195-240 mmHg

Pressure: 0.26-0.32 bar Max working time: 60 minutes Power: 75 W

Dimensions with packaging: 61x45x15.5 cm Appliance dimensions: 41x24x13 cm Weight: 14 kg.

The most powerful and effective monopolar, bipolar and fractional radiofrequency ever for the treatment of skin laxity of the face and body.

- Noticeable results already from the first sessions. or
- Firmer skin, lifted cheekbones, plumped wrinkles, redesigned face oval.
- Improvement of post traumatic skin texture (acne, scars, stretch marks).
- Increased flow of oxygen and nutrients to the tissues.

WHAT IT'S FOR

Radiofrequency is simply the most advanced combined system divided into a revolutionary technology for the treatment of skin laxity of the face and body. The most

effective technology that allows you to combine different treatment modes in a single device: monopolar to treat the deep dermis with 2 different frequencies, bipolar for an immediate lifting effect, fractional to lift cheekbones, plump wrinkles and redesign the oval of the face. Unique power and performance, for results that leave their mark.

HOW DOES IT WORK

Radio frequency uses the principle of capacitive and/or resistive energy transfer in biological tissues: this means that the energy induced at specific frequencies causes a rapid rise in temperature. This deep and uniform action of heating produces a lifting effect due to the shrinkage of collagen fibers, at the same time stimulating the fibroblasts to produce new ones. The fractional transducer, on the other hand, intermittently emits 6 million bursts of energy per second split into a matrix of small dots. The temperature is raised for a very short period of time to effective values for a redefinition of the oval of the face and décolleté, the lifting of cheekbones and eyebrow arches with a general improvement in skin firmness.

TECHNICAL FEATURES

Power supply voltage: 230 - 240 V 50 Hz Absorbed power: 1400 W

Weight: 22 kg

Dimensions (L x W x H): 500 x 480 x 230 mm Display: Touch screen Working conditions: Temperature: 5 ° C - 30 ° C

Relative humidity: 30% - 60% Pressure: 86kPa - 106kPa Transport and storage conditions: Temperature: 5 ° C - 55 ° C Relative humidity: 0% - 93% Pressure: 86kPa - 106kPa Handpiece features

Laser Type: CW, GaAlAs Diode Laser array Laser Class: 4 Wavelength: 808 nm

1064 nm Energy density: 1 ~ 40 J / cm² Pulse frequency: 1 ~ 10 Hz

Pulse duration: 10 ~ 300 ms

Sapphire size: 10 x 10 mm

PROFESSIONAL PRODUCTS FOR USE WITH THE EQUIPMENT

- Neutral laser gel - Transparent photoconductive face and body gel - 260 ml
- Neutral laser gel - Transparent photoconductive face and body gel - 1000 ml
- Neutral laser gel - Transparent photoconductive face and body gel - 5000 ml
- Igienic e slide solution - Sanitizing spray for shaving cod. TLA004
- Repair gel - Post laser soothing face and body repairing gel cod.
- Body Emulsion - PRE laser preparatory body emulsion - 200 ml cod. TLA006
- Face Emulsion - PRE laser preparatory face emulsion - 50 ml cod.
- Sooth Body Emulsion - POST laser soothing body emulsion - 200 ml cod.
- Sooth Face Cream - POST laser soothing face cream - 50 ml cod.
- Screen seaver spf 50 - POST laser cream spf 50 - 30 ml cod.

PROFESSIONAL PHOTOEPILATION

The innovative Laser Diode represents the new frontier of laser technologies which, in addition to the photo-epilation treatment, offers the possibility of carrying out photo-biostimulation sessions for skin regeneration and to prepare the tissues to receive hair removal treatment.

- The light emitted by the laser is transformed into thermal energy which is absorbed by the bulb up to inhibit the production capacity of the hair, thus obtaining an effective and permanent hair removal.
- The high energy delivered by the laser and the depth of penetration, reached by the wavelength at 808 nm, allow the treatment to be carried out even if the hair is not visible but still inserted in the bulb.
- Thanks to the specificity of the wavelength, phototypes from I to V can be treated in a safe and comfortable way.
- Also effective for white and blond hair.

WHAT IT'S FOR

It is a dual function equipment:

- Photo-epilation
- Photo-biostimulation.

HOW DOES IT WORK

The equipment has a double system for cooling the skin in the treated area before, during and after the release of laser energy, for comfortable and effective treatments. The latest generation diode has a window positioning and front emission. The technology, combined with the cooling system integrated in the handpiece, guarantees less dispersion of the thermal gradient generated by the passage of light and makes it stable

the wavelength emitted. The laser beam adjustment parameters are processed by the device automatically by selecting the customer's phototype, the type of hair, the color of the hair and the area. In case you want to customize the treatment, the

possibility for the operator to act on the parameters by varying frequency, duration and power
